Headfitted's client has been associated with OutSystems for more than 4 years. When they started there was no datacenter for OutSystems cloud in India and the nearest was Singapore. Since the client is from the financial domain and in order to comply with the local regulations it was necessary to host the data in the local (Indian) territory.

The Challenge

Since the environments were in separate datacenters, there was no provision to move the existing environment supported by OutSystems. The only option left was to reinstall everything in the Mumbai datacenter. However, the challenge was how to move the data.

“

5.4GB of data migrated flawlessly in a dozen minutes between OutSystems PaaS environments hosted in different regions!

”

Siya Ul Haqu, Director - India Operations
Headfitted Solutions

The Decision & Methodology

Headfitted thought about various options like creating applications to export data to excel and re-import, manually creating SQL scripts, etc.. They knew that all these approaches would take time and need thorough testing. On top of that they had a requirement to migrate BPT data & email/notifications as well. That's when Headfitted decided to evaluate a tool for the migration - so instead of creating custom built code for the migration they have decided to use DMM!

CERTIFIED

Partner

Fast, simple and successful - that was how it went, the Data Migration between the Singapore and Mumbai OutSystems PaaS data centers for a leading financial client of ours, using Infosistema's DMM tool!

Siya Ul Haqu

Director, Headfitted Solutions Pvt Ltd

“

30+ migrations were executed across multiple environments – and it's almost a month since we've done it and everything is working flawlessly!

”
